Client Firewall

Keep one client's information out of another client's work in Claude.

If you work inside several companies at once, one rushed paste into Claude can put Client B's numbers into Client A's deliverable.

client-firewall.vercel.app
Scan for the free template, setup steps and a 3-message demo to try.

Set up in 3 steps

1. In claude.ai, create one Project per client.
2. Paste the instructions below into the Project's instructions.
3. Fill in the rules file for that client and add it to the Project's knowledge.

Before Claude writes a word

● **GREEN** Nothing risky. Claude drafts as normal.

● **AMBER** Sensitive details the task doesn't need. Claude offers a cleaned-up version first.

● **RED** Another client's details or a never-share item. Claude stops and tells you what to remove.

It's a second check, not a guarantee. It only knows the clients you list in the rules file, plus obviously sensitive data. It's a second check, not a guarantee. The model can be wrong.
